Research Experience

MIT Local Universe Group — Aug 2021 – Present
Research Advisor: Lina Necib

- Reconstructing the dark matter density profiles of dwarf galaxies from their stellar kinematics with Graph Convolutional Neural Networks and Normalizing Flows
- Estimating the mass and accretion redshift of satellite galaxies that are accreted into the Milky Way with neural networks and the Illustris-TNG and FIRE simulations
- Constructing the Ananke DR3 mock stellar catalog using the stellar isochrone, dust extinction model, error model, and selection function consistent with the Gaia DR3 survey

MIT LIGO Laboratory — Jun 2019 – Dec 2021
Research Advisor: Erik Katsavounidis, Philip Harris

- Developed a machine learning framework for non-linear noise subtraction using auxiliary channels in gravitational-wav detectors at LIGO
- Developed a real-time gravitational-wave data analysis pipeline using an Inference-as-a-Service model by the NVIDIA Triton Server
- Estimated the sensitivity of LIGO to compact binary mergers during the LIGO Third Observing Run
